Response to Arguments

In view of the Appeal Brief filed on February 19, 2004, PROSECUTION IS HEREBY REOPENED. New grounds of rejection are set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

- (1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,
- (2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-8, and 10 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 11-17 of U.S. Patent No. 6,661,012 B2 to

Art Unit: 2881

Such et al. Although the conflicting claims are not identical, they are not patentably distinct from each other because the patented claims anticipate claims 1-10

Claims 1-3 are anticipated by patented claims 11 and 12.

Claim 5 is anticipated by patented claim 14.

Claim 6 is anticipated by patented claim 11

Claim 7 is anticipated by patented claim 11, 13, and 14 because the layer and spacing arrangement of patented claims 11, 13, and 14 create the focusing effect recited in claim 7.

Claim 8 is anticipated by patented claim 12.

Claim 10 is anticipated by patented claim 12.

Claim 4 is obvious in view of patented claim 17.

Claim 4 requires that at least two of the elements of claim 1 have a round or polygonal cross-section.

Claim 1 is anticipated by patented claim 11 as noted above.

Patented claim 17 recites wire elements having a diameter or cross-sectional area.

Since the term "diameter" can only be associated with a round body, the wire elements of patented claim 17 are therefore round.

Therefore, patented claim 17 teaches the required round wire elements and depends on patented claim 11.

Claim 4 of the instant application is therefore obvious in view of the recitation of patented claims 11 and 17.

Art Unit: 2881

Claim 9 is obvious in view of patented claim 16.

Claim 9 requires that a plurality of layers be provided with an X-ray transparent substance to secure at least two wire elements.

Patented claim 16 recites that wire elements are embedded in a synthetic material that is transparent to X-rays.

The term "embedded" implies that the wire elements are disposed in the material in a fixed way.

Therefore, the X-ray transparent material of patented claim 16 secures at least two wire elements and recites the requirement of claim 9.
